Angular resolved analyser system

The Thermo VG Scientific ARUPS system has been modified so that it is compatible with the RT1 radial transfer device, allowing it to benefit from the addition of extra chambers. The MultiLab ARUPS system, incorporating the ARUPS10 analyser, globally recognised as the industry standard, can be combined with a distribution vessel that has full ESCA port configuration, or with a separate ESCA chamber and bench added to the side of the distribution vessel.

MultiLab ARUPS supplied to the National Synchrotron Radiation Laboratory at the University of Science and Technology of China.
